Timing programming is the same as RF decoy timer.

Please read the entire manual before connecting and configuring Decoy Timer.

Connect the decoy timer according to the diagram.

To configure timer:

1. Short WHITE and GREEN wires together (or push button connected to WHITE and GREEN wires), and then supply power to the timer. After about a second the decoy will turn on for a moment. Disconnect WHITE and GREEN wires or release the button.

2. Push and release configuration button (or short WHITE and GREEN wires together) as you want for the decoy to run. For example, if you want decoy to run 3sec-ON, 6sec-OFF, 1sec-ON and 10sec-OFF : push button for 3 seconds, release and wait for 6 seconds, push for 1 second, release for 10seconds, push the button again and then disconnect power.
